Is India Becoming An Economic Superpower?

Pete Mavrokorodos¹ and Stan Stascinsky²

Abstract

During the last ten years, a country that has been making serious moves towards becoming an industrialized country and changing its status is India. The authors’ purpose in this paper is to do an evaluation, historical, political and economic, to determine how successful India is, and where it is headed.

JEL classification numbers: F43

Keywords: India, Economics

1 Introduction

We will break our discussion into three sections examining India’s history, current economic situation, and economic data from the past thirty years. Some of the data that will be presented includes the Gross Domestic Product, Exports, Imports and Net Trade, Population, and Inflation.

2 Historical Background

In this section we are going to do an in-depth research into India’s history, to present to the reader a solid background of India. After all our history is the basis of our future. India, as will be discussed later in a time line, has a history of more than 5000 years. Obviously we cannot discuss and present everything that took place over these years, but we are going to discuss some of the most important events that played a major role in India’s development. Geographically, India has always been very attractive to invaders, of which some were the Persians, the Greeks, the Chinese, the Arabs and the British, but even though all these invaders went through India, they were not able to stay very long or influence the culture of India.

India’s history shows us that the first invaders were the Aryans, around 1500 BC. The Aryans that came from the North brought with them cultural traditions that we can find in India even today. The Aryans remained there for about 700 years and then moved on to occupy the Ganges Valley and built their kingdoms there.

The second major invasion, took place around 500 BC, when two Persian kings, Cyrus and Darius conquered the Indus Valley. The Persian occupation did not last very long since Alexander the Great and the Greeks invaded and occupied the region around 326 BC. The next major development in India was the dynasty of the Maurya, and their king was Ashoka. The Mauryas conquered almost the entire subcontinent. King Ashoka also introduced Buddhism to most of central Asia, but the Maurya Empire lasted only 100 years after his death.

The next invaders were the Muslims, under Mohammed of Ghor, during 1192. The Turkish kings that ruled the Muslims stayed there until 1397 when the Mongols invaded. In more recent years, India was under British control, and this lasted for about 300 years. India had some good years under British control, but they finally got their independence under their great leader Gandhi by 1947. When the British left though, they created two separate states, Pakistan and Bangladesh. When the British left, the first Prime minister of India was Jawaharlal Nehru, and he kept that office until his death in 1964. Ever since then, India has been a parliamentary democracy.

As was mentioned earlier, India has a history of more than 5000 years, which of course cannot be discussed in a few pages. So below we are going to present a timeline of the most important years and events of India’s history.

### INDIA TIMELINE

- **2500 BC**: Dravidian civilization
- **1500**: Aryans invade India
- **518**: Persians conquered Pakistan
- **326**: Alexander the Great invaded India
- **322 – 182**: Mauryan dynasty
- **320 AD**: The Gupta Indian dynasty
- **700**: Muslims invade India
- **1498**: Vasco de Gama – the first European explorer
- **1526 – 1857**: Mughal rule in India
- **1857**: First war of independence
- **1858**: India comes under direct rule of the British Crown
- **1905**: British divided Bengal into Hindu and Muslim sections
- **1935**: The Government of India Act and the creation of a new Constitution
- **1948**: Mahatma Gandhi assassinated
- **1962**: War with China
- **1964**: Death of Prime Minister Nehru
- **1971**: Third war with Pakistan
- **1984**: Indira Gandhi assassinated and son Rajin becomes Prime Minister

Again this is not a complete timeline for India, as a history of thousands of years cannot be presented in just a few pages, but we presented some of the most important events and years.
3 Current Literature

This section will present the current economic situation in India. We all know what happened in the world economy since 2007; although India was affected, as the information will show below, it was not affected as much as the rest of the world. India is a country with an abundance of natural resources, such as coal, iron ore, manganese, titanium ore, natural gas, diamonds and petroleum among others, and it is able to take advantage of all these resources and benefit out of them.

It also has a number of environmental issues, such as deforestation, soil erosion, air pollution, water pollution, and the fast growing population is using all these natural resources at a very fast rate.

On a different economic aspect, India is developing into an open market economy, where economic liberalization and industrial deregulation are obvious everywhere. As a result of this, India’s average growth rate since 1997 is more than 7% per year.

India’s economy is an agricultural one, since more than half of its labor force is in agriculture, but most of its growth is because of services which account for almost sixty seven percent of its output. In fact out of a GDP of $4.7 trillion during 2012, 17% was out of agriculture, 18% was out of industry and 65% out of services. What makes this more interesting is that out of 498.4 million labor force (2012), 53% were in agriculture, 19% in industry, and only 28% in services.

Even though India’s economy was very strong for a number of years, it started slowing down around 2011 due to some tight monetary measures to fight rising inflation, which rose to 9.2% in 2012, up from 8.9% in 2011. As a result, its growth rate during 2012 dropped to 5.4%, down from 10.1% during 2010, and its unemployment rate rose to 9.9% up from 9.8% in 2011.

The overall production of India consists of agricultural products, such as rice, wheat, oilseed, cotton, tea sugarcane, onions, potatoes and dairy products. On the other hand the industrial production includes products such as textiles, chemicals, food processing, steal, transportation equipment, petroleum, machinery and pharmaceuticals. India’s exports in 2012 totaled $309.1 billion and its imports $500.3, obviously a trade deficit of around $200 billion.

Finally in the middle of all this world economic turmoil and slowdown, the International Monetary Fund, (IMF), projects that India will outpace China in growth with a 10.4% growth rate as opposed to 10.3% for China.

4 Statistical Analysis

In this next section, we are going to present India in numbers, in order to get a better picture about its economy during the last thirty years.

Some of the data that will be presented include the Gross Domestic Product, Exports, Imports and Net Trade, Population, Inflation, just to name a few. Table 1 that follows includes the GDP, Exports/Imports, Population and the GDP Growth Rate:

**SOURCES:**

Exports (2000 = 100) US$ World Bank and OECD National Accounts data files
Imports (2000 = 100) US$ World Bank and OECD National Accounts data files
GDP Constants 2000 US$ World Bank and OECD National Accounts data files
Population Total, United Nations Population Division, World Pop. Prospects

This table gives us some very interesting conclusions. If we take a look at the GDP and the Population growth, we see that the GDP grew by about 540% between 1980 and 2011, whereas the population grew by 77%, which means that India’s growth of the GDP did not result out of the population growth but out of improved efficiency and better use of resources. Another interesting conclusion is that the trade deficit has been steadily increasing, and has reached $38.8 billion by 2011, which shows that India has a growing economy, which cannot meet its demands domestically. The following pages present some figures which illustrate the data presented in Table 1.
Figure 1 shows India’s trade, and as can be seen even though both exports and imports are increasing, the imports are increasing faster.

Figure 2 shows what we discussed before, that both the GDP and population have been increasing, although the GDP has grown by much more than the population.
Pete Mavrokorodatos and Stan Stascinsky

Figure 3: India’s population and net exports

The above figure also shows something we discussed above, that the increase in population has caused a big increase in the trade deficit.

Figure 4: India’s GDP growth rate
Figure 4 illustrates a steady growth in the GDP. The GDP growth rate, fluctuated between 3.4% and 9.8%, with the exception of 1991 when the growth rate was only 1.05%.

5 Conclusion

Finally in the conclusion we are going to put everything together, and try to derive some projections and possibly some recommendations.

The title of the paper is asking if India is becoming an economic superpower. Although India is growing with fairly fast rates, and this was shown in Table 1 and the figures that followed, it has a long way before it becomes a superpower. Obviously it is much better today than it was 30 years ago, with an increase in its GDP by more than 540%, but there are other things that need improvement as well, such as education, infrastructure and standard of living.

At this point we can make a couple of recommendations that can ultimately help the economy of India. The first thing is that they should try to improve their productive efficiency. Hey have both the human resources as well as the natural resources to do that, it is a matter of finding methods to do that, starting with education. If this is accomplished, it will lead India to the second recommendation which is to reduce the trade deficit, as this is very costly.

Finally a third recommendation is for India to take advantage of its IT industry. It is well known that India has an advantage in this area over a lot of countries, labor cost and know how, they should invest heavily in this in order to bring more investments in India. Once more the first thing that India can do here is investment and improvement in education.

In conclusion, this paper is not complete by any means. Any suggestions or recommendations to improve this paper will be appreciated.
